Made to Order Software offering commercial licensing for odbcpp

ORANGEVALE, Calif., October 22, 2008—(BUSINESS WIRE)—In June 2008, Made to Order Software created a new software library called odbcpp. This library is an Open Source C++ wrapper of the Open Database Connectivity (ODBC) library started by Microsoft in 1988.

ODBC hides the details of back-end database systems. In other words, if you support ODBC, you can effortlessly connect to a very large number of database systems such as MS-SQL, Access, Oracle, MySQL and PostgreSQL.

odbcpp is an extension for C++ programmers. It is easy to use and it is a great solution to avoid many bugs as it will automatically handle all the possible ODBC errors for you.

odbcpp is an Open Source project and as such is free and available to all. For businesses that want to sell their software in binary form only, Made to Order Software offers a proprietary license for a small fee.
